## VIP 360°

VIP's 360° approach is applied to code and operational maintenance, providing stakeholder visibility into system development, addressing technical debt early and often, and creating frequent high-quality potentially shippable increments of software.

Unlock the benefits of DevOps

Savvy business leaders know that creating a culture that emphasizes continuous collaboration and communication between development and operations through the software development lifecycle delivers far more business value to the end user. Open, continuous collaboration gives organizations the agility to adapt to the needs of the business as they evolve over time.

What's holding you back?

We're all working towards the same goal, but often a lack of visibility and communication across development, quality assurance and operations teams hinders success. Dispersed groups use different terminology, methodologies and processes, adding additional layers of complexity. On top of it all, competing budget needs and a lack of resources makes it difficult to build a case for efficiency improvements.

Visionary Integration Professionals understands the challenges and bottlenecks organizations face when it comes to DevOps. As a result, we have developed a thoughtful and deliberate integration of DevOps processes and selected Agile methods that can be implemented based on your organization's maturity, size and tolerance over time to help increase your technology's speed to market. We call it VIP 360°. VIP 360° integrates selected systems in a step-wise manner, exploiting operational tempo to gain maximum system penetration into the daily operations.

VIP 360° promotes emergent design and waste elimination, and integrates continuous quality assurance monitoring and accelerated delivery; not accepting one without the others. Our experts look at the work bottom up, optimizing from the first line of code to the final system or application.. Then we step back and view the entire system as a component in a larger system that integrates seamlessly. VIP 360° delivers value and reduces risk through horizontal and vertical alignment.

VIP's Key Features / offerings

- Evaluation of existing processes and tools with advisory services
- Strategic planning for implementing a new DevOps SDLC process and maintaining it
- Strategic staffing with DevOps experienced team members to keep the project going and mentor staff on how to maintain the pace
- Implementation or integration of existing tools to manage the process
- Custom status reports of business leaders and stakeholders
