Workshops

Visionary Integration Professionals (VIP) helps you get the most out of your Hewlett Packard Enterprise Software investments. Flexible scheduling options are available for all of our workshops. For example, any of the following workshops can be delivered as 5 full-time days or 10 half-time days, which allows your staff to continue critical work. Our implementation experts provide custom mentoring and consulting during the other half day. Just choose the timeframe and subjects that matter to you most.

HPE LoadRunner 12.x Workshop – 5 Days

Teaches fundamental principles and key techniques enabling students to design and successfully execute performance tests using HPE LoadRunner. Hands-on lab exercises demonstrate key topics and ensure familiarity with HPE LoadRunner's capabilities and limitations. Learn the fundamentals of how to plan, build, and implement performance tests using VuGen script development with an emphasis on custom script development. Basic ANSI C programming techniques are used. Key topics include: architecture, installation, goal development, planning, defining business processes, performance monitoring, scenario development, test results analysis, and script development with VuGen, including: correlation, parameterization, data preparation, and reporting. TruClient protocol scripting can be included if needed. Workshops are also available for HPE Performance Center with Site/User Admin and previous versions of HPE LoadRunner.

HPE Unified Functional Testing (UFT) 12.x Workshop – 5 Days

Functional test automation enables organizations to dramatically increase the thoroughness, accuracy, and efficiency of software testing. This 5-day workshop teaches the basics of how to plan, build, and conduct GUI Tests using HPE Unified Functional Testing (UFT). Hands-on lab exercises are used throughout the course to demonstrate key topics. Topics covered during the course include: test automation concepts, parameterization, object repository, run-time settings, actions, expert view, checkpoints, data extraction, data tables, and external data sources. The course is specifically designed for web applications, but demonstrates key principles that are directly relevant for the functional automation testing of all architectures. Optionally, additional days can be added to cover API and Business Process Testing (BPT). Workshops are also available for earlier versions.

INTEGRATION
PROFESSIONALS

HPE Application Lifecycle Management (ALM) 12.x Workshop – 3 to 5 Days

HPE Application Lifecycle Management is a unified platform for the management and execution of application lifecycle activities. This workshop includes hands-on lab exercises throughout the course. Topics covered during this course include: release management, requirements management, and manual tests including data awareness, test execution management, and reporting and dashboards. Optionally, additional days can be added to cover other topics including: Sprinter, business process testing, cross-project reporting, site and project administration, work flow customization, and custom project reporting. Workshops are also available for earlier versions.
