

# VIP PROformance for Infor Lawson Performance Testing

The VIP PROformance for Infor Lawson Performance Testing program is suitable for a wide variety of Infor Lawson projects and applications, including:

- Implementations and upgrades for all versions of Infor Lawson
- All modules within Infor Lawson
- Custom Java and .Net developed Web applications that connect to Infor Lawson

Visionary Integration Professionals (VIP) introduces a new concept in affordable performance testing for advanced computer architectures with our VIP PROformance for Infor® Lawson Performance Testing program. This program offers comprehensive performance testing packages with fixed pricing using HP LoadRunner, the industry's number one performance testing tool. For an affordable fee, VIP will provide the LoadRunner tool, licensing, hardware, hosted Internet load generation, and most importantly our expertise in architecting advanced performance tests with Infor Lawson software. The Package options include:

VIP PROformance for Infor Lawson Performance Testing program is designed for customers who have a critical need for performance testing in an Infor Lawson environment, but currently cannot afford it, or do not want to make a long-term investment in the performance test tools and dedicated staff required.

Standard Features:			
Duration	4 weeks	6 weeks	8 weeks
LoadRunner License	Included	Included	Included
LoadRunner Hardware	Included	Included	Included
LoadRunner Performance Monitors	Included	Included	Included
100 Mbps Internet Load Generation	Included	Included	Included
Remote Test Administration	Included	Included	Included
Custom Web Script Development	Included	Included	Included
Experienced Performance Architect	Included	Included	Included
Off-hours Test Execution	Included	Included	Included
Performance Analysis	Included	Included	Included
Improvement Recommendations	Included	Included	Included
Final Performance Report	Included	Included	Included
Maximum Concurrent Users	250	500	1,000
Included Web LoadRunner Scripts	4	7	10
Test Days Included	3	5	5
Package Options:			
Duration	4 weeks	6 weeks	8 weeks
Additional Concurrent Users	Available	Available	Available
Additional LoadRunner Scripts	Available	Available	Available
Alternative Script Protocols	Available	Available	Available
Additional Test Days	Available	Available	Available
Infor Lawson Tuning Services	Available	Available	Available

## Customer Benefits

The VIP PROformance for Infor Lawson Performance Testing program offers the following key benefits to customers who are looking for affordable, high-quality performance testing services:

- **Affordability** – Many customers have not been able to afford performance testing because of the initial and ongoing costs of purchasing expensive performance testing licenses. This program allows VIP to effectively rent LoadRunner licenses to Infor Lawson customers in combination with our expert-level performance engineers—all at an affordable price!
- **Fixed pricing** – Engagement prices are agreed upon in advance and include all necessary labor, software licenses, and hardware. Travel and expenses are extra if required.
- **Savings** – Choosing a VIP PROformance for Infor Lawson package can save customers up to 70% over the cost of purchasing their own LoadRunner license.
- **Experienced performance engineers** – VIP provides Infor Lawson customers with salaried staff members who are experienced at designing and leading performance tests in a wide variety of complex architectures, including Infor Lawson.
- **External hosted load testing** – Packages include the use of VIP load generation farm, which can generate loads of up to 100 Mbps of data for Internet-facing applications.

---

## Customer Success Story

VIP's solution was selected to help a major federal financial institution upgrade its current ERP software to Infor 9.0.1 in a new production environment. Before going live, the client needed to conduct performance and load testing to resolve potential issues and verify the upgrade could support the anticipated load. Specifically, they wanted to focus the testing on the finance and supply chain components of the system, as well as a travel application that was developed in-house and incorporated into Infor. Using LoadRunner, VIP was able to emulate up to 500 concurrent interactive users performing critical business process activities within the client's Infor system. This type of testing was designed to expose potential system issues caused by the load. The Infor system remained stable throughout the testing period, sustaining transaction rates that exceeded the client's identified limits for extended durations. VIP then worked with the Infor and client teams to review the results; identify potential performance, capacity, and stability issues; and make recommendations for future testing of other Infor components and system improvements.

---

## Deliverables

Each VIP PROformance for Infor Lawson Performance Testing package includes the following deliverables:

- A test planning document describing the project goals and business processes.

VISIONARY  
INTEGRATION  
PROFESSIONALS

- The agreed upon number of LoadRunner scripts custom designed to simulate users performing key business processes. These scripts become the customer's property upon project completion.
- A final report describing the key findings including: top performance statistics, implemented improvements, known outstanding issues, future risks, and recommended enhancements.

---

## Customization

VIP has a thorough understanding of an Infor Lawson customer's needs. We recognize that every project is unique and often has challenging goals with aggressive timelines. Custom project packages can be designed around key objectives that include an altered time schedule, support of multiple technologies, and additional LoadRunner licenses. VIP can also provide global onsite services and support when needed.
